LE MODH

c'est quoi ?

PETITION

CONTRE LE MONOXYDE DIHYDROGENE (MODH)

L'hydroxyde d'hydronium (composé sans couleur ni odeur) peut tuer par inhalation accidentelle. Il a été trouvé dans les biopsies de tumeurs et lésions précancéreuses. Il contribue également à l'effet de serre. Le monoxyde dihydrogéné reste souvent utilisé :

- Dans les centrales nucléaires françaises
- Chez les sportifs de haut niveau pour améliorer leurs performances
- Dans de nombreuses recherches sur les animaux
- Comme additif dans certains aliments de restauration rapide et dans la plupart des produits de consommations (médicaments contre la toux, bombes de décapage de four, produits d'hygiène...)
- Comme instrument de torture en Iran et Chine et historiquement dans les camps de concentration Nazis et dans les goulags soviétiques de Staline.

Nous souhaitons agir pour stopper toute diffusion de monoxyde dihydrogéné.
